**MoEIS Update
Dave Freeman**

MoEIS File Transfer Component of PAQ 30 Update:

- The APCP and the MoDNR/MIS programs have had preliminary meetings to establish a project plan to develop and implement the file transfer component of MoEIS.
- Due to recent turnovers of app/dev staff in the MIS program. APCP staffs have been bringing the new MIS staff up to date on this project, along with the new division DP coordinator. We will be meeting weekly until this project has been completed in house this calendar year. All indications are that this should be a component of MoEIS that will be deployed for customers to use in the 2005 emission-reporting period.
- MIS has indicated that this project has been determined the number one software project that MIS resources will be allocated to by the app/dev management group.

How MoDNR visions this file transfer component working:

- The APCP will develop in house using our present environment, a file format that will need to be used by customers who want to use this component to submit their data to the APCP.
- This file format will use the most recent EPA-NIF format that will be encompassed in a XML schema for submittal to the APCP. The XML schema will allow for different environments to produce the needed XML file from a customer's or local agency's present emission data tracking system.

Cooperation from facilities or local agencies will be needed.

- In order for this to be a successful project the APCP will need volunteer participants from the larger facilities and the local agencies who have the IT resources available to commit to working with the APCP and MIS on this project.
- We have had good indications in the past that larger facilities who have these IT capabilities were willing to work with the department on this project. We need to confirm all participants who would be willing to work on this project with the department as soon as possible.
 - Any willing participant please contact:
